

ICT for Learning – Good Practice of European Projects

Workshop of eLBa2010 (Business Track)

2nd July 2010, 10:00 – 14:30

Description of the Workshop

ICT enables individuals to enhance their social networking and this has the potential to enhance their learning. Self-learning and informal peerlearning are important ways of developing e-skills and digital competences. But they are also increasingly important skills in formal learning. A new generation of ICT-based social networking tools and platforms ('Web 2.0' and other relevant ICT developments) is rapidly growing in popularity. Examples are weblogs, wikis, podcasts, social software, virtual social sites, as well as tools such as mobile phones.

On the other hand, fostering innovation skills requires novel learning and teaching approaches and strategies based on active learning approaches such as creative problem solving, discovery, learning by doing, experiential learning, critical thinking and creativity. ICT-enhanced learning can effectively support these novel approaches.

The European Commission supports the development and piloting of these new approaches in different programmes.

The workshop gathers presentations of successful projects from the different sub-programmes of the Lifelong Learning Programme as well as from the South Baltic Programme. It gives an excellent opportunity to share experiences and good practice. The workshop offers as well the chance for networking among the different stakeholders and target groups involved in the projects, to develop new project ideas, to transfer good results from the past and to find new consortia for forthcoming calls.

Agenda:

10:00 – 10:30

InnoSkills – Innovation Skills for SMEs

Daniela Marta, PARKURBIS, Covilhã

10:30 – 10:50

VET-InTech – Multimedia Training of VET Professionals for Innovation Support in Biotech Sector
